

Fig. 1: a) Correlation of dry (JJA) season rainfall with following wet (DJF) season rainfall. b) Correlation of wet (DJF) season rainfall with following dry (JJA) season rainfall from the CESM1.0 control integration. The period used here is 1901-2000. Only correlations at 10% significance according to t-test are shown.

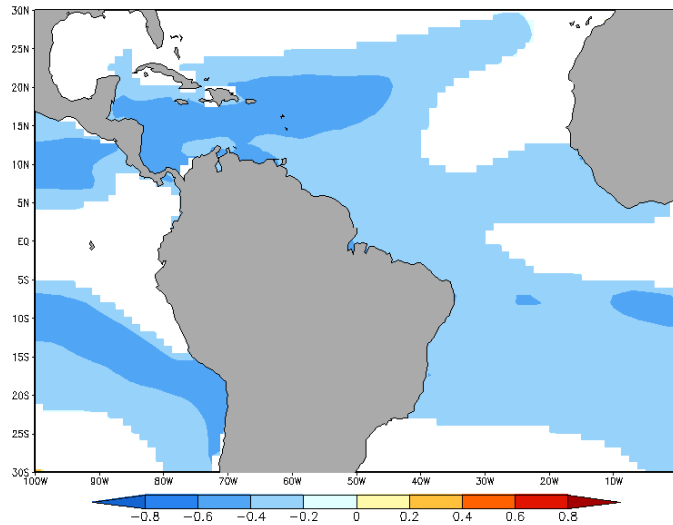

Fig. 2: Correlation of DJF seasonally averaged rainfall over the boxed region (50°W - 65°W and 7°S - 7°N) with the following JJA seasonally averaged SST from the CESM1.0 control integration. Only correlation at 10% significance level according to t-test is shown. The period of data used here is from 1901-2000.
